Safety on Priority

A fully safe and responsive lift for user

Infrared Light curtain

Full height infra red curtain with multiple cross-crossing light beams (approx 150 beams) detect the smallest obstruction in door path & stop doors from closing.

Auto Rescue Device

Three phase electric power is disconnected from control panel & motor, the movement elevator moves beyond the limit of top & bottom terminal floors causing immediate application of the brake to bring the elevator to halt.

In the event of power failure, the elevator will stop for few seconds and move the lift at a very slow speed till the nearest floor and open the door.

Safety In Case of Over Travel

In the event of ropes breakage, elevator speed exceeds the rated speed . The over speed governor activates the clutch mechanism by switching off main controls and jamming the elevator car safety on guide rails.

Safety In case of Rope Breakage
